VSX BASE MOUNTED CENTRIFUGAL PUMPS

Prices in the table below include VSC, VSCS configurations. Pumps are cast iron bronze fitted construction, 1045 steel shaft with 304SS sleeves covering the wetted area of the shaft, unitized EPR/carbon/silicon carbide mechanical seals with 316SS hardware mounted on 304SS sleeves. Maintenance free grease lubricated bearings. Coupling shall be non-spacer type, alignment friendly, suitable for VFD service, and protected by an ANSI/OSHA coupling guard. Fabricated steel grout-less baseplate.

* Except where noted. Consult size selections below, or submittals. 12x14x22, 14x16x22, and 16x18x19 sizes are standard fitted with 416SS shaft and 304SS mechanical seal sleeves.
** Consult submittals for standard seal description.
*** Coupling description above may vary with selections above 1000 HP/1750 RPM or 700 HP/1150 RPM. Consult current submittal for details.

VSX PRICES

Prices in table below are for bronze fitted construction pumps.
PEO: Includes Pump End Only
PB&C: Includes Pump, Fabricated Steel Baseplate, Coupling, and Guard.
Prices do not include motor or companion flanges. Motors weighing over 5,000 lbs. will be shipped separate and un-mounted.

* 6G max allowable impeller diameter for L bearing frame is 11.875. Any impeller greater than 11.875 (ie. next highest trim 12.00) requires an XL bearing frame. Only valid for pumps with1800 RPM motors.

‡ 8GB max allowable impeller diameter for L bearing frame is 11.125. Any impeller greater than 11.125 (ie. next highest trim 11.25) requires an XL bearing frame. Only valid for pumps with 1800 RPM motors.

The cutoff for bearing frame size is 75hp. (less than or equal to 75hp uses a L bearing frame, motors greater than 75hp uses a XL bearing frame).

BUILD-TO-ORDER PUMPS - THREE PHASE MOTORS

Prices in table below are for stainless steel fitted, standard mechanical seal construction pumps with non-footed volute, and B&G Choice ODP three phase motors.
60 Hz motors 1HP and above are NEMA MG-1 Table 12-12 Premium Efficient.
60 Hertz: All ODP motors ¾-10 HP at 1800 RPM and 3-15 HP at 3600 RPM are 200, 230/460, or 575 volt. For 208v operation use a 200v motor.
See Bulletin 6897 EISA 2007 for efficiency table details and warning regarding the use of 208-230/460 motors when used for 208v operation.
50 Hertz: All ODP motors are 190/380, 400 or 415 volt (specify) at 1450 RPM or 2900 RPM, 1.0 Service Factor. Prices do not include companion flanges.

60 Hertz Special Motors - List Adders

All Premium Efficient motors 1HP and above are NEMA Table 12-12 Premium Efficient.
See Bulletin 6897 EISA 2007 for efficiency table details and warning regarding the use of 208-230/460 motors when used for 208v operation.

Available voltages are: 230/460/3/60 or 200/3/60 or 575/3/60: All HP's and speeds shown below.
For 208v operation use a 200V motor.

H-Q Non-Witnessed Test Available only on Complete Close-Coupled or Frame-Mounted Pumps w/ factory installed Motors and Base Plates. Factory H-Q Test Limitations - Maximum Motor HP: 100 HP ; Maximum Flow: 1200 GPM ; Maximum Discharge Diameter: 4" Dia. Submersible Pumps are Performance Test only with factory test motors Unless ordered with job motor. Larger units or SAE models are production Hydro Test only.

Part Number	List Price	Part Description
CERTFDTEST	$1,710.00	Certified H-Q Performance Test at Factory--- ADDITIONAL 2 WEEK LEAD TIME
HYDROTEST	1,800.00	Hydrostatic test at 1.3 times working Pressure at Factory---ADDITIONAL 2 WEEK LEAD TIME
CERTTESTE	4,065.00	Certified H-Q Performance Test outside Factory*---ADDITIONAL 4 WEEK LEAD TIME
HYDROTSTE	3,295.00	Hydrostatic test at 1.3 times working Pressure outside Factory *---ADDITIONAL 4 WEEK LEAD TIME

-Pump will be shipped with documentation upon completion of test if performance is within ANSI/HI 14.6 acceptance grade 2B of published rating or stated customer rating point. Pumps will not be held pending approval. For other acceptance criteria contact factory.
-Witnessed Certified Test List Price is 2x List Price of the Non-Witnessed Certified Tests
*Consult Technical support for Pump size that require outside factory testing

Integrated Technologic Sensorless Control (ITSC), Wall Mounted Panel, Pump Test Adder: $ 13,164.00

- Use the above adder to pair Technologic VFDs to a specific end suction pumps for sensor-less control (adder is per pump)
- Technologic Variable Frequency Drive will be shipped loose for wall mounting
- Pump selected must have a continuously rising power curve (see EXCEL spreadsheet to validate selection)

MANUAL BYPASS OPTION

The adjustable Frequency Drive (AFD) with Manual Bypass provides a means of manually interrupting, isolating and transferring the motor from the output of the AFD to allow starting, running, and stopping of the motor directly from the AC line power.

TECHNOLOGIC™ 5500 PUMP LOGIC CONTROLLERS

PSG-TEC55-925
Effective September 22, 2025
Replaces Price Sheet PSG-TEC55-525
Dated May 27, 2025

Minimum Billing: $100.00 Net Price
These prices supersede all other quotations and are subject to change without notice. Prices are F.O.B. Shipping Point. This equipment is ordered from the Dallas, TX facility.

The Technologic 5500 Series controller standard features include:
- 4 analog inputs, additional analog input card optional
- Up to 6 pumps in parallel, see specific models below
- NEMA 1 enclosure
- UL listed
- PID function (Proportional, Integral, Derivative)
- 4-line alphanumeric operator interface in plain English
- External Diagnostics (Sensor, AFD, Pump)
- Standard hardwire communications:
- remote start/stop
- general alarm contact
- all analog inputs
- one configurable analog output
- Modular design allows for unlimited configurations of I/O
- Data logging

Technologic 5501
For 1-3 pump systems without B&G Automatic Bypass:. **$32,204.00 List**

Technologic 5502
For 4-6 pump systems without B&G Automatic Bypass
or 1-3 pump systems that interface with B&G Automatic Bypass: * **$33,436.00 List**

*** NOTE:** Add the price of appropriate Automatic Bypass Panel from price sheet PSG-BYP.

The above prices are for Standard B&G Tech 5500 programs including Best Efficiency and End of Curve Protection. Please note End of Curve Program requires Optional Flow Sensor, see price sheet PSG-ST. See options for Pressure Boosting applications.

Standard and Optional Communications:

The Technologic 5500 Series Pump Controller can be configured to match your specific needs. Standard units include a 4-line alphanumeric operator interface display, remote start/stop contact and general alarm contact. To select optional hardware, you must know how many analog and digital inputs and outputs are required to meet equipment specifications.

The standard analog output can be configured as a 4-20mA or 0-10VDC signal to represent drive speed or active zone process variable. The standard unit is supplied with one available analog output. Additional analog output requires adding an analog output card with 2 analog outputs per card.

Analog Output Card **$4,399.00 LIST**

All 4-20mA analog inputs are powered by the Technologic 5500 and can be individually configured to accept any one of the following signals: pressure, differential pressure, temperature, differential temperature, flow, or kW. The analog input module is also capable of being powered by a BAS. Four analog inputs are supplied with all standard Technologic 5500 controllers. Additional analog inputs require adding an analog input card with four analog inputs per card.

Analog Input Card 5 through 8 **$5,812.00 LIST**
Analog Input Card 9 through 12 (includes analog base) **$9,336.00 LIST**

Additional digital outputs are available as a set of eight in a module that is isolated from the controller's other I/O modules. Digital output signals can be configured to be individual pump on/off status, pump failure, or AFD failure.

Digital Output Card (8 channel) **$2,443.00 LIST**

The optional RS-485 card allows Johnson Controls Metasys N2, Modicon's Modbus, or BACNet Class II MS/TP Communications. Consult Factory for any other protocols some of which include: Allen-Bradley Data Highway, Profibus and Trane Tracer (requires communication bridge device provided "By Others".)

RS-485 card (Johnson N2, Modbus, BACNet, MS/TP, BACnet IP Card): **$4,021.00 LIST**
LonWorks Interface Gateway: **$13,802.00 LIST**

Additional analog and/or digital I/O is available through custom programming and additional hardware. Consult factory for these unique circumstances.

Options

Differential Pressure Switches* for Pump Failure Indication
Part # S12221 (175 psi working pressure)…….. $2,660.00 LIST
Technologic Input power Disconnect Switch…… $2,603.00 LIST
NEMA 12 Enclosure…….. $11,494.00 LIST
NEMA 4 Enclosure…… $12,834.00 LIST
* One per pump required for Technologic 5500 pump failure detection.
UPS: T55 UPS- Uninterruptable Power Supply…..…….. $2495 LIST

Pressure Booster Options:
Audio Visual Alarm (Horn w/push to silence)…… $3,964.00 LIST
No Flow Shut-Down …….. Included
High pressure cut-out switch…… Included

Special Programming

Consult Factory for any sequence of operation that deviates from B&G Standards. Note that custom programming or any software modifications are charged at a **net price** of $150 per programming hour.

BP42X-INK ≤ 100 plates	5-190-22-901-002	$545	25	1

Notes:
1) Insulation kit includes three piece die cut, with top, bottom, and wrap around side.
2) All insulation pieces are 1/2" Armaflex with peel off pre-glued backing.
3) Rated for -40° F minimum, 220° F maximum temperature.
4) Insulation kit is only suitable if all four connections are either on the back or front of the unit.
5) For other temperature or configuration requirements, please consult factory.
6) Insulation to be applied by customer.

Installation Instructions:
1) Before removing pre-glued backing and applying to unit, layout all pieces and fitup to unit. The top and bottom pieces should be placed on the unit first and then the wrap around side should be placed on second. It should wrap around the unit as well as the top and bottom pieces.
2) If any pieces need altering, it should be done prior to application. For plate counts less than stated above, trimming of the wrap around side piece will be required.
3) Especially for units with sweat or socket weld connections, piping should be connected prior to applying any insulation. This is to prevent overheating and possible melting of the insulation.
4) Let unit cool before proceeding to the following steps.
5) The piece without holes should be applied opposite the connections. The pre-glued backing should be peeled off slowly as the insulation is being applied.
6) The piece with four holes should be applied. The pre-glued backing should be peeled off slowly as the insulation is being applied.
7) The wrap around side piece should be applied. The pre-glued backing should be peeled off slowly as the insulation is being applied.

NOTES:
1. Prices do not include nozzles. Use nozzle adder, page 2.
2. When using 300 PSIG design pressure, refer to Note 1 under Tubesheet, page 3.
3. On straight tube unit, use table under fabricated steel channel head prices for determining adder for rear head.
4. 22" thru 30" have as standard a 150 PSI design pressure fabricated steel bonnet head.

NOTES: 1. Fabricated head prices do not include nozzles. Add list extra for size, type and number of nozzles.
2. Use 300 PSI nozzle adder when using 300 PSI fabricated steel head price.
3. When increasing the size of a shell nozzle from standard add the price difference between the standard nozzle size and the larger nozzle size. (Do not deduct when decreasing nozzle size.)
4. All flanged nozzles use ANSI raised face flanges.
5. Nozzles 3" NPT and smaller are 150 PSIG. Above 3" NPT 125 PSI.

14	2,640.00	28	8,960.00
16	2,865.00	30	10,295.00

NOTES:
1. Add list extra for thicker stationary tubesheet for design pressures above 150 PSI to 400 PSI. (Add one stationary tubesheet price for U-tube and double stationary tubesheet price for "OF" design.) On floating tubesheet design, add both stationary and floating tubesheet price for design pressures above 150 to 300 PSI.
2. Serration prices are for "U" tube units. Double price for straight tube units. Serration prices do not include the tube sheet.

   A. Serrate holes when tube sheet material is softer than tube material.
   Example:

TUBE SHEET MAT'L	TUBE MAT'L
Carb Steel	Stainless
Brass	Admiralty
Brass	90/10 CU-NI

   B. Serrate holes for use with heat transfer oils and any units rated above 400ºF, and highly flammable fluids.

NOTE: The prices shown are the list prices each for extra baffles. To convert from steel to another material use the difference in the prices and multiply by the total number of baffles in the exchanger.

TIE RODS AND SPACERS

Material	Price Per Ft.
Carbon Steel	Std.
Brass	$126.00
Stainless Steel	175.00

NOTE: The price per foot is price per nominal length of the heat exchanger, i.e., an SU-85-2 with brass tie rods and spacers would have a list adder of 5 x $126.00 /Ft.

The 304 SS Tightening Bolts bolts adder is only valid for 150 psi designs.

Notes:

1.) Connection adders are for two connections, all four connections must of similar design.
NPTs: 2 male ti. / 2 male 316 ss, 4 male ti., 4 male 316 ss, or all 4 female steel.
Liners: 2 titanium / 2 316 ss, 4 titanium, 4 316 ss, or all 4 unlined.
Flanges: 2 titanium / 2 316 ss, 4 titanium, 4 316 ss, or all 4 steel (mixing steel and alloys is not acceptable).

2.) Liner adder only good for 150# designs. Consult Home Office for liner price adder for 300# designs.

3.) High pressure designs - for 3" series & above, standard connections are studded ports with a carbon steel companion flange.
If a liner is provided and the companion flange is to be made from the same material as the liner, consult the factory for a price adder.
Otherwise, the companion flange will be carbon steel. See note 5 on page 2 for additional information.

4.) Multipass designs - for the connections on the pressure (rear) plate, same construction applies as in note 3 above.

Tightening Bolts	304 SS										

The 304 SS Tightening Bolts bolts adder is only valid for 150 psi designs.

Notes:

1.) Connection adders are for two connections, all four connections must of similar design.
Liners: 2 titanium / 2 316 ss, 4 titanium, 4 316 ss, or all 4 unlined.
Flanges: 2 titanium / 2 316 ss, 4 titanium, 4 316 ss, or all 4 steel (mixing steel and alloys is not acceptable).

2.) Liner adder only good for 150# designs. Consult Home Office for liner price adder for 300# designs.

3.) High pressure designs - standard connections are studded ports with a carbon steel companion flange.
If a liner is provided and the companion flange is to be made from the same material as the liner, consult the factory for a price adder.
Otherwise, the companion flange will be carbon steel. See note 5 on page 2 for additional information.

4.) Multipass designs - for the connections on the pressure (rear) plate, same construction applies as in note 3 above.

Notes:
1.) Lead-time is 8 working weeks
2.) Insulation is removable thermal blanket type. See page 27 for further specifications.
3.) Insulation is length of tightened plate pack only. Cut outs provided for ports and any extrusions.
4.) Insulation covers front, back, top and two sides. Bottom is left open for leak detection.
5.) It is recommended that a drip pan be used in conjunction with insulation.
6.) Insulation shipped loose as a separate line item.
7.) Field assembly of insulation onto heat exchanger is required. Above prices do not include installation.

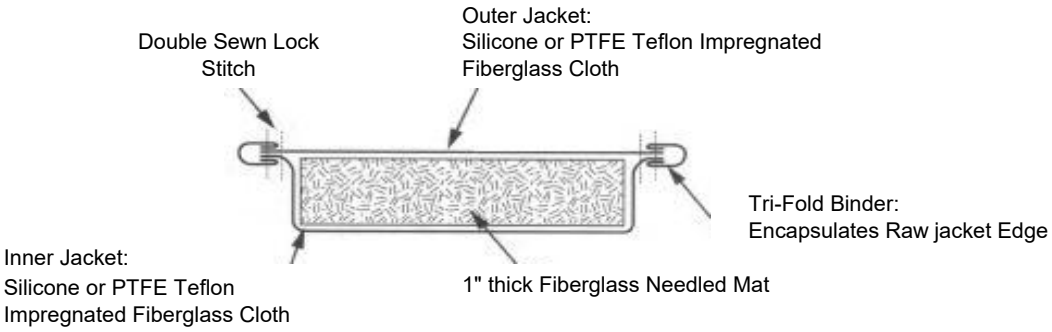
BLANKET INSULATION SPECIFICATION

DESIGN COMPONENTS:



Blanket Construction
Removable blanket construction shall be a double sewn lock stitch with a minimum of 4 stitches per inch. All jacket edges will have a tri-fold Silicon or PTFE Teflon Fiberglass cloth binding. No raw cut jacket edge will be exposed. Stitching will be done with Teflon coated fiberglass thread.

Fasteners
Fasteners to be wire tie or Velcro® flaps.

R-Value
1" thick insulation has a R-value of 4.75 @ 75 °F.

Assembly Requirements
Field assembly is required. Each blanket insulation project will be shipped with assembly drawings identifying each piece location. Cut outs are provided for all connections and extrusions such as tightening bolts. Assembly drawings can be emailed upon request.

Blanket Insulation Weight

When multipiece construction is necessary, the total number of pieces will be minimized with no one piece exceeding 40 lbs.

Shipping
Blanket insulation is shipped loose from the heat exchanger in cardboard boxes. Packaging is not designed for outdoor storage, thus some type of covering is necessary if stored outdoors. Insulation should be protected from water damage and/or other abuses prior to installation.

Installation Guidelines
Open boxes with care. Do not cut deep into container to avoid damaging the insulation blankets. Use leather gloves to install the blanket insulation per the assembly drawings. Apply only on clean, dry surfaces. A physical effort may be required for proper placement and fit.
Insulation is suitable for outdoor use.

Some condensation may still occur and is normal. A drip pan is recommended to collect this.

Typical Product Properties Specifications

Core Blanket	ASTM C 1086	standard specification for Glass Fiber Felt Thermal Insulation Service
	ASTM C 553	Temperature up to 1000 °F.
Jacketing Material	----------	PTFE coated fiberglass composite material.

MSDS sheets available upon request.

Caution
Typical industry handling practices should be exercised for the protection of the worker, such as: wear long-sleeved, loose fitting clothing, head covering, eye protection and also appropriate respiratory protection when handling and applying material. Wash with warm soap and water after handling. Wash work clothes separately and rinse washer. For specific handling practices, refer to MSDS sheets.

Note

The data is subject to normal manufacturing variations and is supplied as a technical service subject to change without notice.

Notes:
1.) Lead-time for unit with Port Strainers is 8 working weeks minimum.
2.) See page 28 for estimated additional pressure drop with Port Strainer.
3.) Port Strainer is length of tightened plate pak only.
4.) Port Strainer is 20 mesh (typical).
5.) Above adders are for one Port Strainer per unit (one side only). Do NOT double above price for more than one Port Strainer per unit. Consult factory if more than one Port Strainer is required per unit.
6.) Port Strainers are removable through an additional port hole at the pressure plate.
7.) Above prices inlcude the additional steel unlined port hole on the pressure plate sealed with a carbon steel blind flange cover. Consult factory for price adder for other materials than carbon steel.
8.) Port location must be specified.
9.) See page 29 for further design specifications.

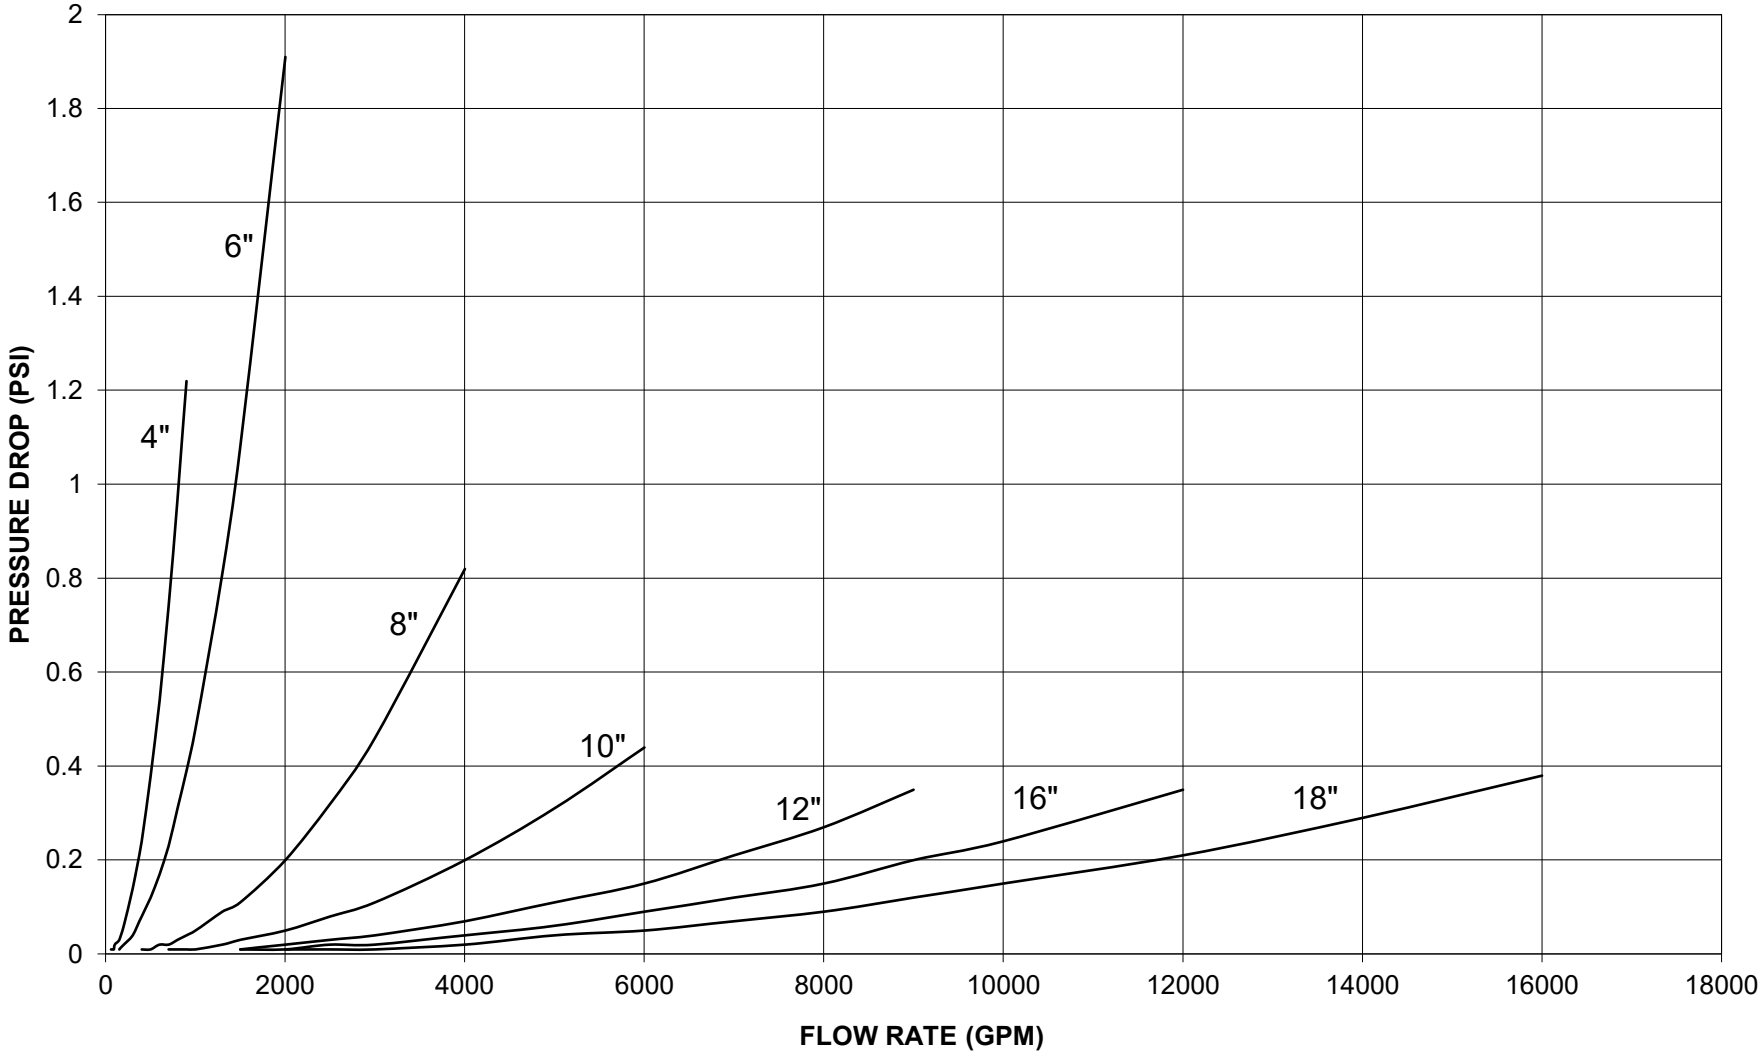
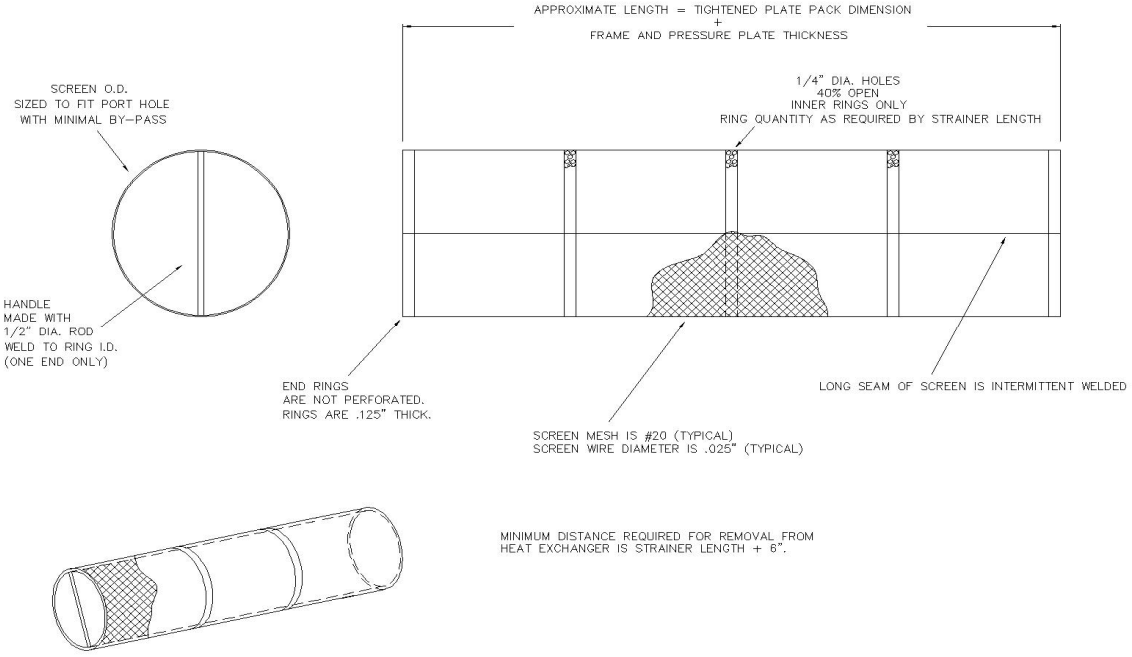
ESTIMATED PRESSURE DROP FOR CLEAN PORT STRAINER



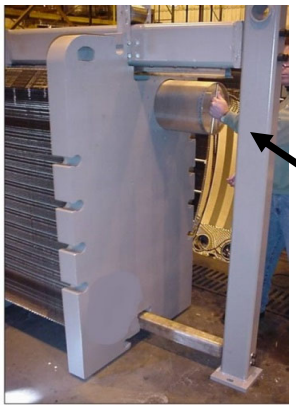
PORT STRAINER SPECIFICATION

DESIGN COMPONENTS:



FABRICATION REQUIREMENTS:

All components are 304 Stainless Steel.
Screen Mesh is #20 (typical) up to 5' length. Over 5' length, strainer may be made from perforated plate.
Screen Wire diameter is .025" (typical).
Support rings are on the inside of screen.
Screen is folded over rings .50" at each end.
Screen is welded to end rings on the inside with .375" welds spaced on 2" centers.
Screen is welded to all intermediate rings. Tack welded outside. Spot welded inside.
Length of strainer is designed to the specific plate count for the unit to ensure straining occurs for all flow channels.
Strainer located in the header region of the plate pack.
Strainer is accessible through an additional cleaning port located on the pressure plate without removing any piping.
Additional cleaning port on pressure plate is covered with a carbon steel blind flange.



Strainer may be removed for inspection or cleaning through an additional cleaning port fabricated on the rear pressure plate.

Handle for easy removal of strainer.

Notes:

1.) NA = Not Available
2.) Lead-time for ABS is 14 working weeks
3.) Above prices are for one ABS per unit (one side only).
4.) ABS includes (1) 4-way steel valve, actuator, control panel and (2) connecting steel ells.
5.) Above prices do NOT include installation of valve, control panel or connecting ells.
6.) ABS to be shipped loose from the heat exchanger. Mounting by others.
7.) Above prices only valid for 150 psig design pressures.
8.) Recommended maximum velocity through the back-flush valve is 12 ft/sec. If the velocity exceeds this, then the valv size must be larger than the connection size on the heat exchanger. Consult the factory for pricing in this instance.

9.) Electric actuator to be 208 volt, 3 phase, 60 hz unless otherwise specified.
10.) See pages 31 & 32 for further design specifications.

AUTOMATIC BACK-FLUSH SYSTEM (ABS) GENERAL SPECIFICATION

1.0 General:

An Automatic Backflushing System (ABS) shall be supplied as part of each plate and frame heat exchanger to maintain optimum heat transfer surface cleanliness. The ABS automatically maintains clean heat transfer surfaces without interrupting normal equipment operation

2.0 Product Description:

The ABS System shall consist of a 4-way reversing valve with connecting ells that permits the reversing of the direction of water flow in the heat exchanger. This flow reversal has been found to significantly reduce fouling in the plate and frame heat exchanger. The flow reversal is controlled by a control panel mounted to the plate and frame heat exchanger or at a separate location as desired by the customer. The frequency of flow reversal is set up to match job conditions. Normally, flow reversal would occur once every six to eight hours.

3.0 Equipment Specification:

3.1 Four-Way Valve:

Valve shall be of steel construction (A36 or better) with 150# ANSI flanged ends, positive sealing type with all internal sealing parts of hard rubber and 304 stainless steel. It shall be manufactured in accordance with ASME Unfired Pressure Vessel Code Specification per Section VIII for operation at a system working pressure of 125 PSIG (or as specified) with a maximum system differential of 35 PSIG. It shall be hydro-statically tested to 1.5 times designed working pressure. Valve shall allow for manual fail-safe turning, and have a mechanical position indicator. The valve will be mounted to the plate and frame heat exchanger by the customer using the provided connecting ells, if purchased.

3.2 Pneumatic or Electric Actuator:
Double actuating cylinder to assure trouble-free operation pre-mounted on the valve. Pneumatic actuator operation to be on 50 to 100 PSIG air pressure supplied by customer. Electric actuator voltage, phase and frequency as advised and supplied by customer.

3.3 Position Control Switches:
Micro-switch to be supplied for valve to indicate complete turn of valve in normal and reverse flow.

3.4 Control Panel:
The on-load control shall have the following features:
Nema 4x enclosure with mounting bracket.
Cycle counter.
24-hour timer to automatically initiate the on-load cleaning cycle.
Manual Override of pre-set cleaning cycle.
Power On light.
Diverter Position Indicator lights:
Normal Flow
Reverse Flow
Malfunction Light - To indicate slow turning or incomplete valve turning.
4-way solenoid valve for actuator operation to be mounted at control panel or actuator.
OPTIONAL
Electric Unloading Feature.
Flow Switch Bypass.

3.5 Ells
Set of two carbon steel connecting Ells with 150# ANSI flanged ends to connect valve to heat exchanger.

3.6 Operation and Installation Manual:
Provided as requested.

Note: The data is subject to normal manufacturing variations and is supplied as a technical service subject to change without notice.

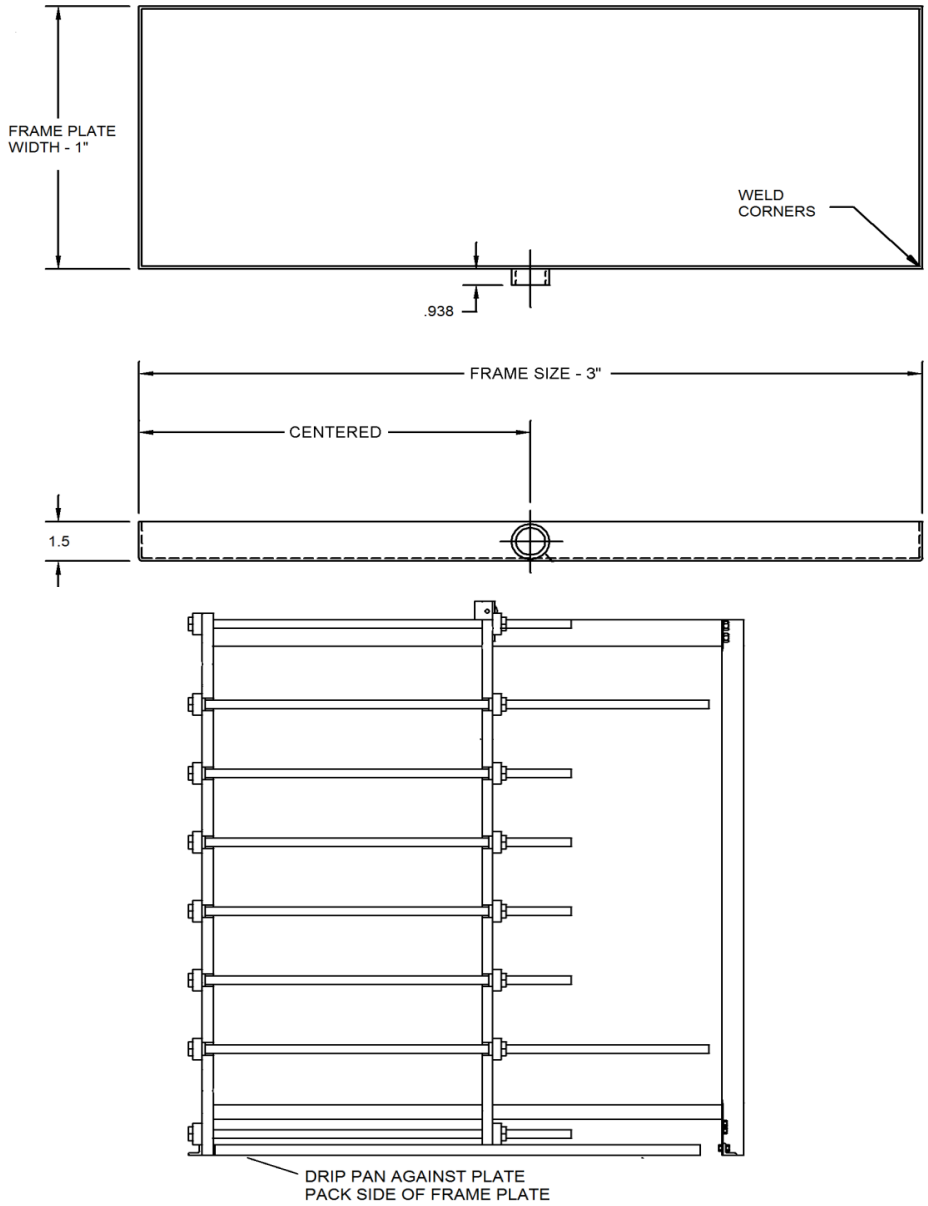
Notes:

1.) Grayed area means frame size not available for that model.
2.) Drip pans typically 1.5" high. Height may be adjusted based on clearance below plate pack.
3.) 1/2" NPT drain connection included.
4.) When drip pan supplied with a 1" or 2" ported model, the frame must be the "old" style with a support column in order to have sufficeint clearance under the plate pack.
5.) Lead-time for Drip Pan is 6-8 working weeks.

DRIP PAN



NOTES:
1.) Above is typical only and dimensions are not certified for construction purposes.
2.) Coupling is located as close to bottom as possible.
3.) Carbon steel drip pan is galvanized.
4.) Drip pan is designed to mount behind the front frame plate and underneath the plate pack to collect residual fluid within the flow channels when performing maintenance and to catch possible leaks. It is not designed to hold the entire plate pack fluid volume nor collect condensation from the frame plate.

180105	Model 616PF-B35 45 GPM, 20 PSI ¾HP 3500 RPM 115/230 Volt, Single Phase, ODP	7,411.00

Bronze fitted liquid ends have bronze impeller and wearing ring. Motor bracket and volute are cast iron. Motors are drip proof ball bearing 40°C having stainless steel shaft. Single phase motors are 115/230 volts with thermal overload protection through 2 hp. Three phase motors are 200 or 230/460 volts.

Connections 1½" and smaller are threaded. Connections 2" and larger are flanged. Price includes companion flange (except suction side of PF pumps). Suitable for up to 30 psi suction pressure and up to 225°F pumping temperature.

Adapter Flange Kits

Mount any DOMESTIC/HOFFMAN PF or B pump with "A" flange to existing competitor's receiver.

* 3500 RPM is standard. 1750 RPM is not available.
** Control Panel cannot be mounted and wired on 6 and 9 gallon receivers, use 14 gallon minimum.
*** Series WC & SCC, Hoffman Stock Units at 3500 RPM are available for this capacity. Refer to pages 4 or 5.
† All 1750 RPM units and the 3500 RPM, 60 psi discharge pressure unit use the 14 gallon, "A" design receiver as standard. 3500 RPM units up to and including 50 psi discharge pressure use the 14 gallon, "B" design receiver as standard. To obtain the "A" design receiver in lieu of the "B" design receiver in 3500 RPM units to 50 psi, add $1,581.00.

Control Panel pricing - see Pages 21 and 22.

3500 RPM is standard. 1750 RPM is not available.

** Control Panel cannot be mounted and wired on 6, 9, and 14 gallon receivers, use 23 gallon minimum; mechanical alternator only available on duplex units.

*** WC & SCC Hoffman stock units at 3500 RPM are available. Refer to page 4,

NA - Not available due to receiver space limitations

ACCESSORIES FOR DOMESTIC SERIES CS UNITS:

Water level gauge w/shut off valve (mounted on receiver) (Not available on 6, 9, or 14 gal. receiver)		$1,432.00
Dial thermometer (mounted on receiver) (Not available on 6, 9, or 14 gal. receivers)		506.00
Inlet basket strainer (shipped unmounted)	2”	1,666.00
	2½”	2,218.00
	3”	2,477.00
	4”	3,894.00
Discharge pressure gauges (mounted on pump discharge including shut off cock)		613.00 Each
Mechanical alternator (duplex units, replaces 2 float switches and provides sequencing of 2 pumps, plus provides stand-by of second pump on high level)	Nema 1	757.00
	Nema 4 (Not available on 14 & 23 gal. receivers)	4,598.00
Nema 4 float switch to replace standard Nema 1 float switch		2,237.00 Each
Pump pad blind flange (to blank off pump opening during service).....(DF0210)		172.00 Each
Butterfly valves, mounted between pump and receiver to permit service without draining receiver		
	Up to 75 GPM	1,813.00 Each
	Up to 115 GPM	5,526.00 Each

OPTIONAL NEMA 2/U.L. LISTED ELECTRIC CONTROL PANELS FOR DOMESTIC SERIES CC, CS, CB, CBE, CU, CED AND CHD UNITS

DESCRIPTION OF OPTIONAL PANEL COMPONENTS:

- Magnetic Starters must be used on all 3 phase motors and single phase motors 2 HP and larger.
- Disconnect Switches and Circuit Breakers. Either fuses or a circuit breaker is required ahead of the starters to protect against short circuits. A disconnect switch or circuit breaker also provides a means of shutting off power for service. Combination starters include a magnetic starter plus a disconnect switch or circuit breaker.
- Selector Switches. "Auto-Off-Hand" switches may be furnished on single units and duplex units with a mechanical alternator. "Off-Hand-Lead-Lag" switches may be furnished on duplex when 2 float switches are supplied. *(Selector switches are furnished only when starters are provided).*
- Electric Alternator may be furnished on duplex units to provide automatic sequencing of lead pump. Use only when magnetic starters are provided. Use only with 2 float switches.
- Transformers are required when power supply exceeds 250 volts.
- Pilot Light. Pumping running pilot lights are available to indicate pump operation.
- An audible alarm to indicate high water level may be furnished. Use only when a separate float switch is furnished.
- Specify panel components to be furnished with unit at extra cost.
- Series SAP units: A separate control power supply is required. A disconnect switch or circuit breaker for the control circuits must be provided when combination starters are specified.
- **Control Cabinet *must be wall mounted* for Underground CU Units, CC Units with 6 or 9 gallon receivers and CS Units with 6, 9, or 14 gallon receivers.**

* Price includes required manhole.

To price an oversized receiver, start with the price for the smallest model shown with size receiver desired, use the add/delete column by deleting the duplex pumps and then adding for the correct number of pumps at the specified hp.

i.e., a 30 x 72 receiver is specified with three ½ HP pumps.

① Start with:	$47,282.00	② Add ½ HP pumps	4,880.00
Subtract ¾ HP	(5,580.00)	(see 30 x 48 pricing)	4,880.00
pumps	(5,580.00)		4,880.00
		Total List Price	$24,630

** Stock Panel (NEMA 4X) Available 161029

† Control Panel must have 115 volt control voltage, add control transformer. Control Panels NEMA 12 and 4, refer to page 21 & 22

For Quadraplex panel pricing, multiply duplex pricing by two.
Alarm with silencing relay with float switch: $3,826.00† Control relay (add 1 for each motorized valve): $1,102.00
Alarm less silencing relay with float switch: $2,644.00† Power Control Switching Relay: …….. $551.00
Optional thin wall rigid conduit additional charge per motor: $2,706.00
Standard wiring uses liquid tight metal flex conduit.
Note: A Power control switching relay is recommended for duplex or triplex units when individual pump disconnect switches are specified. This relay is recommended in order to maintain control power to the water makeup system in the event pump #1 disconnect switch is turned off or pump #1 fails. In this event the control power will be automatically supplied to pump #2.

Orders for boiler feed units with control panels or control panel only for existing boiler feed units must be accompanied by a boiler feed questionnaire.

Prices shown are for single or three phase, ODP motors.
Single phase motors are 115/230 volts and are limited to
2 Hp maximum. Three phase motors are 200 or 230/460 volt.

NOTE: Transformers are required to reduce control voltage to 115v Add transformer.

The **SINGLE UNIT** is a complete vacuum heating pump having single air pump and single water pump.

The **SEMI-DUPLEX** unit has a single air pump and duplicate water pumps delivering double water capacity on demand.

The **DUPLEX UNIT** has duplicate air pumps and duplicate water pumps delivering double air and/or double water capacity on demand.

*Lead-lag manual sequence control for water pump assemblies on semi-duplex, and water and air pump assemblies on duplex unit.

The standard lead-lag sequence control provides for manual selection of the lead or active pump. The following alternators are available as special accessories in place of lead-lag.

A. Automatic electrical alternator in dust tight plug-in enclosure for duplex water and/or air pumps (used with 2 standard float and/or vacuum switches.) 250 volts max. Transformer(s) required.
B. Float operated automatic mechanical alternator for duplex water pumps only (in lieu of 2 standard float switches).

DOMESTIC SERIES VCMD VACUUM BOILER FEED PUMPS

TABULATION OF STANDARD COMPONENTS included in base price of unit.

STANDARD EQUIPMENT INCLUDES COMPLETE ASSEMBLY WITH CONTROLS MOUNTED, WIRED AND FACTORY TESTED	SINGLE	SEMI-DUPLEX	DUPLEX
Steel boiler feed receiver, vacuum gauge, water level gauge, air vent check valve, control cabinet and inlet strainer with brass screen	1 of each	1 of each	1 of each
Vertical air pump and drip-proof motor assemblies	1	1	2
Vertical water pump and drip-proof motor assemblies	1	2	2
Automatic hurling water probe level control	1	1	1
Magnetic Starters with Thermal overload relay for all 3 phase motors (Control Panels are NEMA 2/U.L. Listed).	2	3	4
Vacuum Switches (NEMA 1 Only)	1	1	2
Float switch and solenoid valve with Y strainer for make up water	1	1	1
Selector switches (with off position)	2	3	4
Low water cut off float switch on boiler feed receiver	1	1	1
Float switch for overflow control	1	1	1
Thermometers in hurling water and condensate receivers	2	2	2

Standard single phase motors are 115/230 volts.
Standard three phase motors are 200 or 230/460 volts.

NOTE: Transformers are required to reduce control voltage when power supply exceeds 115 volts.

All orders for Boiler Feed Units must be accompanied by a Boiler Feed Questionnaire. See Catalog Section 190 (3-1A).

The **SINGLE UNIT** is a complete vacuum heating pump having single air pump and single water pump.

The **SEMI-DUPLEX** unit has a single air pump and duplicate water pumps delivering double water capacity on demand.

The **DUPLEX UNIT** has duplicate air pumps and duplicate water pumps delivering double air and/or double water capacity on demand

OPTIONAL NEMA 2/U.L. LISTED CONTROL PANELS FOR DOMESTIC SERIES MJ VACUUM UNITS

DESCRIPTION OF OPTIONAL PANEL COMPONENTS:

- Magnetic Starters must be used on all 3 phase motors, and single phase motors when combined HP is 1½ HP and larger.
- Disconnect Switches and Circuit Breakers. Either fuses or a circuit breaker is required ahead of the starters to protect against short circuits. A disconnect switch or circuit breaker also provides a means of shutting off power for service. Combination starters include a magnetic starter plus a disconnect switch or circuit breaker.
- Selector Switches. "Auto-Off-Continuous" selector switches provide a means of shutting off pumps and a means of testing. "Off-Lead-Lag-Cont" selector switches may be furnished on duplex units to provide manual alteration. Use only when magnetic starters are provided.
- Electric Alternator may be furnished on duplex units to provide automatic sequencing of lead pump. Use only when magnetic starters are provided.
- Transformers are required to reduce control when power supply exceeds 115 volts.
- Pilot Light. Pumping running pilot lights are available to indicate pump operation.

Specify Panel Components to be furnished with unit at extra cost.

Standard wiring to controls uses liquid tight metal flex conduit.

International List Prices

These prices are subject to change without notice. All shipments will be billed at the price in effect at the time the order is received and accepted at Xylem McDonnell & Miller in Morton Grove, IL. Orders received with requested deliveries beyond normal lead times will be billed at price in effect at time of shipment.

Minimum invoice is $100.00 net.

All quotations are conditional on 60 days acceptance unless stipulated otherwise in writing, and to approved credit rating or reference, otherwise payment terms are cash in advance or by irrevocable Letter of Credit confirmed by a United States bank payable by presentation of documents. All prices are stated in United States dollars.

All shipments are F.O.B. shipping point. Full freight allowance will be made on an order of $5,000.00 or more Net Price Value to one destination within the continental United States or Canada. Xylem reserves the right to select the transportation company where freight is allowed.

For complete warranty and detailed terms, refer to invoice or acknowledgement. Prices shown are for products packed in domestic shipping containers. Export boxing and charges are available upon request at an additional cost.

Standard lead times are established based on past demand levels, and do not include transit time. Customers with unusually large quantities or critical time needs should consult factory for actual shipping dates.

Customers under cash in advance payment terms please note: shipping lead time will begin once full payment has been received and posted to your account.
